

Addressing the human risk factor

The problem: human error

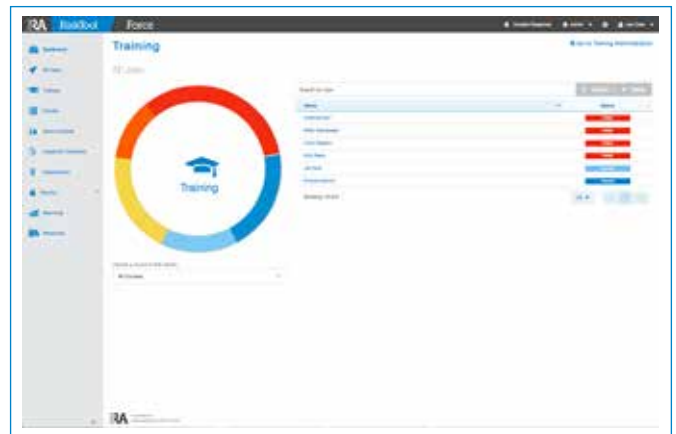

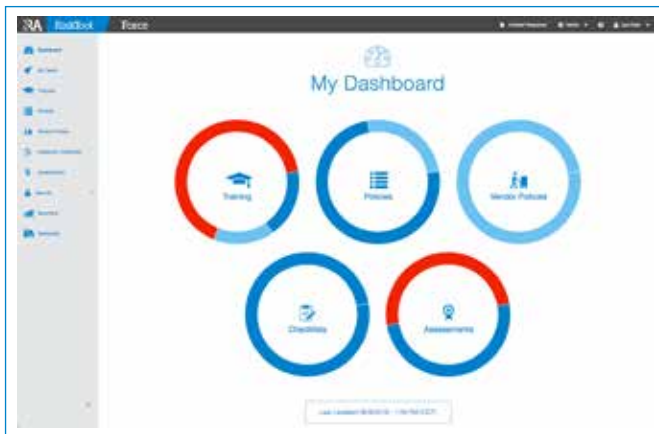

Cyber attacks continue to rely on human interaction, effectively tricking end users into opening a malicious attachment, inserting an infected flash drive or falling for an email phishing scam.

The solution: RiskTool

RiskTool is an easy-to-use, web-based platform to administer cyber security and policy training, transforming employees from a source of risk into a force for security.

- / Loaded with workforce training content to help users develop their cyber “street smarts”
- / Content is based on real-life cyber threats documented by RA Labs
- / An Assignment Engine lets you quickly distribute content to individuals or groups, with the click of a mouse
- / A compliance tool that includes policy templates and more

Easily manage assignments and view progress

Trained users make fewer mistakes than untrained users. When employees know what they should do — and what they should not — they generally follow those rules.

RiskTool comes loaded with engaging, effective workforce training content

RiskTool is not an academic-focused training program that takes hours and hours for employees to complete. It's simple and easy to set up, and each module takes 10 minutes or less to view. In short, this is effective security training that people do not hate.
