

## More comprehensive network security, right now

### The problem: Internal threats

Despite all efforts to secure your network from external threats, the internal threat remains and is even more dangerous.

### The solution: ThreatSweep

The ThreatSweep managed service leverages advanced intrusion detection techniques with bi-directional IP and DNS shunning. In addition to blocking external threats, ThreatSweep will detect and alert you to compromised devices, employee noncompliance or error, network configuration vulnerabilities and other threats from within your network.

Our ThreatSweep service automates the work of protecting your network by filtering out non-critical events and issuing "Hot Alerts" when detecting true, critical threats that require immediate human intervention.

- / ThreatSweep includes all features and functionality of IntelliShun:
  - Line speed blocking against malicious IPs and domains
  - Rapid install and immediate time-to-value
  - Continual threat intelligence updates
  - Augments existing security layers
  - Accepts customer-provided blacklists
  - Operates autonomously outside of firewall
- / Offers internal network visibility into threats and policy violations
- / Performs deep packet inspection at wire speed
- / Issues hot alerts on actionable events with specific recommendations
- / RA Labs engineers available to aid in alert resolution

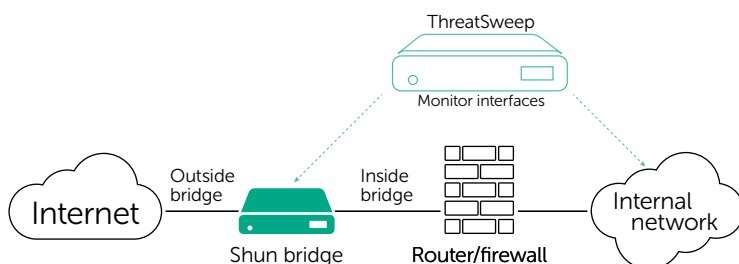

### The ThreatSweep user interface

ThreatSweep features a rich user interface that gives you visibility to the status of your network and the threats being averted.

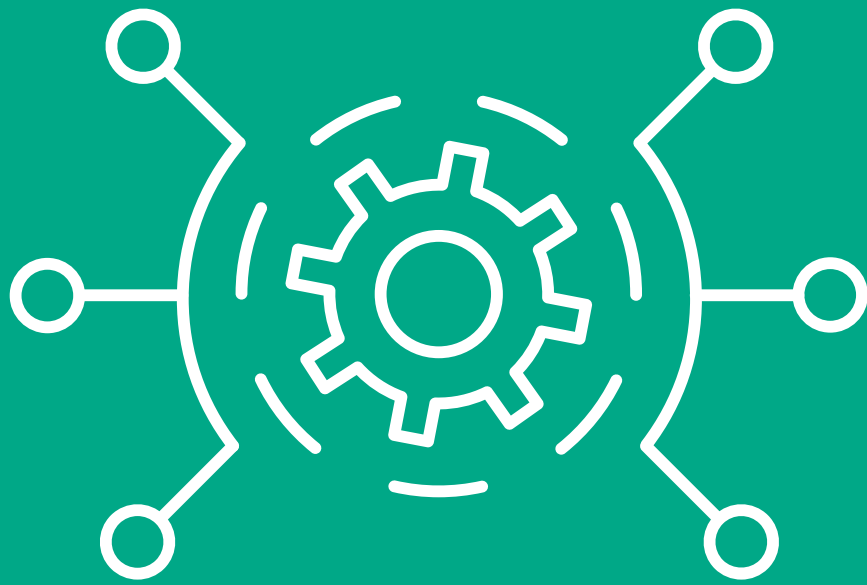

- / View types of attacks and generate custom reports
- / See which workstation an alert originates from
- / Includes support for whitelisting

ThreatSweep leverage advanced intrusion detection techniques with bi-directional IP and DNS shunning.
